Education

M.S., Data Analytics Engineering

Jan 2025 - May 2026

George Mason University - Fairfax, VA | GPA: 3.87

B.A., Statistics

Aug 2020 - Dec 2023

University at Buffalo - Buffalo, NY

Experience

Lead Automation Analyst

Jan 2026 - Present

Educate. Radiate. Elevate.

- Automated data cleaning and reporting workflows using Excel and Python, reducing manual preparation time by an estimated 70% and improving data accuracy across a caseload of 20 - 50 students.
- Queried and analyzed raw student performance data using Python and SQL to identify trends; delivered data-driven recommendations to students and parents.
- Mentored new team members on data analysis and automation best practices, accelerating onboarding.
- Translated complex data findings into clear narratives tailored to non-technical audiences including parents and board members.

Student AI Operations Analyst

Jan 2026 - May 2026

Precise Software Solutions Inc.

- Built an AI-assisted FDA Form 483 drafting platform on AWS, automating ~75% of the manual documentation workflow and significantly reducing inspector response turnaround time.
- Implemented OCR for handwritten and typed inspector notes; integrated Google Gemini to generate draft observations grounded in 21 CFR citations with supporting evidence.
- Developed an end-to-end document generation pipeline that outputs FDA Form 483 and EIR documents directly in .docx format, eliminating manual formatting steps.

Data Analyst

Nov 2025 - Jan 2026

Educate. Radiate. Elevate.

- Automated 3+ recurring Excel reporting workflows cutting manual processing time by an estimated 2-3 hours.
- Designed an interactive Tableau dashboard that transformed raw student data into visual insights for 20-50 students, allowing the stakeholders to identify trends immediately.
- Conducted trend analysis and presented findings through visual reports to support student and parents.

Projects

Washington D.C. Crime Research & Analysis

R · Python · AWS Athena (SQL)

- Analyzed 2024 D.C. crime data from Data.gov using SQL, Python, and R to uncover geographic and temporal crime trends across the city.
- Produced visualizations including crime density maps, bar charts, and scatterplots to communicate actionable public safety insights.

Market Sentiment Analysis: Social Media vs. Stock Volatility

Python · NLP · Yahoo Finance API

- Collected and analyzed 2024 Reddit data from r/WallStreetBets to explore the relationship between retail investor sentiment and stock price volatility.
- Applied NLP-based sentiment analysis and cross-referenced results against Yahoo Finance data to identify potential correlations between public sentiment and price movement.

Skills

Languages & Tools: Python, R, JavaScript, SQL, MS Excel, Tableau, Salesforce

Core Skills: Data Cleaning, Statistical Analysis, Data Mining, Dashboard Design, Workflow Automation, Stakeholder Communication
